### Peer Review Report

## Peer review report 2 On “Estimating Climate-Change Effects on a Mediterranean Catchment under Various Irrigation Conditions”

### Original Submission

#### Recommendation:

Revision

#### Comments to Author:

Generally, the questions posed by the two reviewer have been handled in an thorough manner. I still think it is a shame that the work is not compared to results from other parts of the area, at least semi-arid climates. However, the article has a quality now that is sufficient for publication.
